

**REAL TIME VEHICLE ALERT SYSTEM**

5

**ABSTRACT**

A method, system and program product are provided for enabling a third party to instantly notify a remotely located vehicle owner by sending a message to an IP addressable onboard vehicle computer, which in conjunction with a vehicle alert server, retrieves owner supplied contact information, which may be an IP address and/or telephone number, and forwards the third party message to a device with the IP address or telephone number previously supplied by the owner.
